# GAURI SATISH TAWADE

Full-Stack Developer | SQL & MySQL
+91-9226048421 | tawadegauri403@gmail.com | Dhule, Maharashtra, India
linkedin.com/in/gauri-tawade | github.com/gauri-creator

## PROFESSIONAL SUMMARY

Full-stack developer (MCA candidate, expected 2026) with strong SQL and relational database skills. Designed and managed a normalized 10+ table MySQL schema validated against 500+ seeded records for a job portal built with AngularJS and REST APIs during a 6-month internship, using Git-based version control and unit testing. Independently developed a bus booking platform on a normalized MySQL schema with enforced referential integrity, and a machine-learning-based recommendation engine using Python. Strong problem-solving and analytical skills, a quick-learner mindset, and close attention to detail across the development lifecycle.

## TECHNICAL SKILLS

- **Databases & SQL:** SQL, MySQL, Relational Schema Design, Database Normalization, Referential Integrity, Data Modeling
- **Languages & Core CS:** SQL, JavaScript, Python, HTML5, CSS3, Object-Oriented Programming (OOP)
- **Frontend:** AngularJS, Bootstrap, jQuery, Responsive Web Design
- **Backend & Data:** REST APIs, JSON, Pandas, NumPy, Scikit-learn
- **Tools:** Git, Unit Testing

## INTERNSHIP EXPERIENCE

**Software Developer Intern - Abuzz WebTech Pvt. Ltd.**
*Jan 2025 - Jun 2025 (6 Months) | Job Portal Web Application*
*Tools: MySQL, SQL, AngularJS, Bootstrap, jQuery, REST APIs, Git*

- Designed and managed a normalized 10+ table MySQL schema for a full-stack job portal, validated against 500+ seeded records, supporting candidate registration, resume uploads, and end-to-end job applications.
- Built job-posting, applicant-tracking, and candidate-shortlisting dashboards backed by the MySQL database and used daily by the internal team, streamlining recruiter workflows.
- Implemented real-time job search and filtering by consuming REST APIs and building responsive AngularJS/Bootstrap UI components with jQuery-driven form validation.
- Collaborated with the internal team using Git for version control, wrote unit tests covering core application logic, and debugged issues before each release.

## PROJECTS

**Bus Management System - Web Application**
*Tools: MySQL, SQL, HTML5, CSS3, JavaScript | GitHub: github.com/gauri-creator*

- Engineered and normalized the MySQL schema across users, buses, routes, and schedules to eliminate duplicate booking records and enforce referential integrity.
- Designed and developed a web platform centralizing scheduling, booking, and reservations for 5 bus routes, replacing a manual, register-based booking process.
- Built an admin dashboard to add buses, edit routes, and manage bookings/reservations from a single screen, consolidating a multi-step manual workflow into one interface.

**Music Recommender System - Machine Learning**
*Tools: Python, Pandas, NumPy, Scikit-learn | GitHub: github.com/gauri-creator*

- Built a content-based recommendation engine that surfaces similar tracks using cosine similarity across a 1,000-song dataset.
- Engineered genre, artist, tempo, and mood features from raw metadata to drive similarity scoring.
- Evaluated and validated recommendation quality through manual relevance checks against held-out tracks.

## EDUCATION

**Master of Computer Applications (MCA) - Expected 2026**
School of Computer Science, KBC North Maharashtra University, Jalgaon

**Bachelor of Computer Applications (BCA) - 2021 - 2024**
Systel IMR, Dhule - KBC North Maharashtra University, Jalgaon
